Ph.D. thesis

Title Raman spectroscopy of crystals with molecular groups: NH_4MX_3 and $MX_2 \cdot 6\text{H}_2\text{O}$

Supervisor Prof. José Manuel Calleja

Description I studied the structural and vibrational properties of ammonium trihalide perovskites and hexahydrates. Special emphasis was given to the effect of structural phase transitions and hydrogen bonding on the local symmetry and internal vibrations of the molecular groups ammonium and water. The experiments included low temperatures down to 10 K and high hydrostatic pressures on a diamond anvil cell.

Date October, 1986
